PROFESSIONAL SUMMARY

Early-career DevOps/Cloud Engineer with hands-on experience in AWS cloud infrastructure, CI/CD pipelines, containerized deployments, Infrastructure as Code using Terraform, and DevSecOps security assessment. Experienced in SAST, SCA, dependency and container vulnerability triage using SonarQube, OWASP Dependency-Check, Snyk, and Trivy. Built a production-grade deployment platform reducing provisioning time by 83%, with a focus on automation, secure deployments, reliability, and observability.

WORK EXPERIENCE

DevSecOps Intern

SecIQ Technologies LLP

Jul 2026 – Present

Remote – Bengaluru, India

- Performed end-to-end triage of raw SAST findings using SonarQube across Python, Java, and JavaScript projects, analyzing flagged code, validating True/False Positives, mapping findings to OWASP categories, and providing remediation recommendations.
- Performed SCA and dependency vulnerability triage using OWASP Dependency-Check and Snyk, analyzing CVEs, affected packages, installed and fixed versions, and validating findings using NVD, Debian Security Tracker, and Secure Software.
- Configured OWASP Dependency-Check in Jenkins to automate dependency scanning and report generation, and performed Trivy-based vulnerability triage on Docker container images during security assessments.
- Analyzed assigned findings from client projects and security assessment environments, documenting vulnerability details, OWASP classifications, affected code or packages, and remediation recommendations.

Cloud Computing Intern

Codec Technologies Pvt. Ltd.

Jan 2026 – Apr 2026

Remote

- Deployed and configured cloud infrastructure on AWS (EC2, S3, VPC) in a professional environment as part of a 3-month AICTE & ICAC approved internship.
- Implemented Infrastructure as Code using Terraform and containerization with Docker to automate deployment workflows.
- Collaborated in a remote team environment to deploy and manage cloud-based solutions, contributing to CI/CD pipeline integration and secure infrastructure practices.

PROJECTS

ML Deployment Platform | AWS, Terraform, ECS Fargate, CloudFront, Docker, Flask, PostgreSQL

[GitHub](#)

- Reduced application deployment time by **83% (30 min → under 5 min)** by building a self-service ML deployment platform that automates EC2 provisioning, Docker installation, application deployment, and NGINX configuration through a 13-step orchestration pipeline using boto3 and Paramiko.
- Provisioned production-grade AWS infrastructure using modular Terraform, deploying a multi-tier architecture with VPC, ECS Fargate, RDS PostgreSQL, ALB, CloudFront, S3, ECR, IAM, and Secrets Manager.
- Designed a secure cloud architecture with CloudFront serving the frontend, ALB routing API traffic to ECS Fargate services in private subnets, and RDS PostgreSQL isolated within database subnets using layered security groups and least-privilege IAM.
- Integrated AWS Secrets Manager to securely manage database credentials, JWT secrets, and SSH keys, injecting secrets into ECS task definitions at runtime and eliminating hardcoded credentials.

AWS DevOps Platform | AWS, Terraform, Docker, GitHub Actions, NGINX, CloudWatch

[GitHub](#)

- Provisioned production-ready AWS infrastructure using Terraform, automating deployment of VPC, EC2, IAM, S3, and CloudWatch resources through Infrastructure as Code.
- Designed an end-to-end GitHub Actions CI/CD pipeline that executes automated testing, builds multi-stage Docker images, publishes them to GitHub Container Registry, and deploys to EC2 with health-check validation.
- Implemented production security using least-privilege IAM roles, GitHub Secrets, non-root Docker containers, encrypted S3 storage, and hardened NGINX reverse proxy configuration without hardcoded AWS credentials.
- Implemented observability using CloudWatch dashboards, centralized logging, custom infrastructure metrics, and application telemetry with boto3, validating platform reliability through k6 load testing with zero request failures.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, ECS Fargate, S3, IAM, VPC, CloudWatch)
Networking: TCP/IP, HTTP/HTTPS, DNS resolution, load balancing concepts; AWS VPC, subnets, security groups
Infrastructure as Code: Terraform
Containers & Orchestration: Docker, Docker Compose, Kubernetes (Pods, Deployments, Services, kubectl basics)
CI/CD: Jenkins, GitHub Actions, Groovy (Declarative Pipeline), Security Scanning
Programming & Automation: Python, Bash, boto3, Paramiko
Monitoring & Logging: CloudWatch, Prometheus, Grafana — configured basic exporters, scraped metrics, and built simple dashboards for application monitoring
DevSecOps & Security: SAST, SCA, Vulnerability Triage, CVE Analysis, OWASP Top 10, SonarQube, OWASP Dependency-Check, Snyk, Trivy
Tools & Platforms: Linux (Ubuntu), Git, GitHub, NGINX, Gunicorn

EDUCATION

Master of Science (M.Sc.) in Data Science <i>Periyar University</i> CGPA: 7.5/10	Aug 2024 – Apr 2026 <i>Salem, Tamil Nadu</i>
Bachelor of Science (B.Sc.) in Statistics <i>Presidency College (Autonomous), University of Madras</i> CGPA: 8.47/10	Jun 2021 – Apr 2024 <i>Chennai, Tamil Nadu</i>

CERTIFICATIONS

Continuous Integration and Continuous Delivery (CI/CD) IBM · Coursera • Completed in March 2026; covered CI/CD pipelines, build automation, and deployment strategies.	<u>Verify Credential</u>
